

STOCK MANAGER

Owner's Guide

Everything the app does — billing, stock, schemes, load forms, returns and reports — in plain steps.

Inventory, Billing & Load-Form manager for your distribution business.

The same app is branded per company — your name and logo appear at the top-left.

Version 2.0

1 What this app is for

Stock Manager keeps your whole distribution business in one place on a Windows PC — no internet needed. You record what you buy in, bill your shops, load vans, take returns, run schemes, and see your profit. Everything is saved on the PC for the Windows user who runs it.

- **Works offline.** All data stays on this computer; nothing is sent anywhere.
- **Two ways to run it:** the installer (adds a Start-menu and desktop shortcut) or the portable file (runs from a USB stick, no install).
- **Your data is safe across updates.** Installing a newer version keeps your existing data.

Keep a backup

Your data lives in one file on this PC. Take a backup regularly (Settings → Data) and keep a copy on a USB or another PC. If the computer fails, the backup is the only way to get your data back.

2 Installing and opening

Copy your company's zip to the PC and right-click → **Extract All**. Then either:

- Run “... **Setup 2.0.0.exe**” to install normally — it makes a Start-menu entry and a desktop icon.
- Or run the “...-**Portable.exe**” directly — nothing is installed; good for a USB stick.

First-time Windows warning

Because the app is not code-signed, Windows SmartScreen may warn the first time you open it. Click **More info**, then **Run anyway**. This is normal and only happens once.

3 Getting around the screen

The menu on the left is grouped. Click any item to open that screen; the current screen is highlighted.

Overview	Dashboard — today's numbers at a glance · Profit / Loss — earnings over any period
Sales	New Bill · Bills (list) · Returns · Load Forms
Catalog	Products · Schemes · Shops · Purchases
System	Settings — company details, tax, backups, appearance

You can work almost entirely from the keyboard — see the shortcuts on the last page, or press **F1** inside the app at any time.

4 First-time setup (do this once)

Before you start billing, set the app up for your business:

1. **Company details.** Settings → Business: name, address, phone, NTN and GST number. These print on your bills and invoices.
2. **Default tax.** Settings → set your GST / Default Tax % so new bills start with it.

3. **Products.** Add your items with their cost, selling rate and pieces-per-carton (see §6).
4. **Shops.** Add your regular shops with a unique code each (see §7) — or let them be saved automatically as you bill.
5. **Owner PIN (optional).** Settings → set a PIN to protect sensitive actions.

Try it safely first

Settings → Data → **Load sample data** fills the app with a month of pretend bills so you can practise. When you're ready for real work, take a backup and use **Start fresh** to clear it.

5 Products — your item catalogue

Products → + **Add Product**. Each product carries:

SKU / Code	The short code you type on a bill (e.g. 106). Keep codes unique.
Pcs per Carton	How many pieces make one carton — used to turn cartons into pieces.
Product Name	Full name shown on bills.
Group / Flavour set	Optional. Put the same group on every flavour of one pack (e.g. "JAM 190G") so a free-goods scheme can count them together — see §8.
Cost (per pc)	What you pay per piece. Used for profit — it is never shown to shops.
Rate (per pc)	Your selling price per piece. Margin is worked out for you.
Opening Stock	Pieces on hand when you first add the product. After that, stock changes only through purchases, bills and returns.
Min Stock	When stock drops to this, the product shows up in Low-stock warnings.

Adding stock later

To top up an existing product, use **Stock In** on the Products screen (enter cartons and/or loose pieces). For a full delivery from a supplier, use **Purchases** instead (§9) — it also updates the cost.

6 Shops (customers)

Shops → + **Add Shop**. A shop has a **Code**, Name, Address, Phone, NTN and CNIC. When you type a shop code on a new bill, its name and address fill in automatically.

- **Codes are unique.** You can't add a new shop on a code that already exists — the app tells you which shop owns it. Delete that shop first if you really want to reuse the code.
- **Bills never rename a shop.** Saving a bill only fills a missing address; it never changes a saved shop's name.
- New shops you type on a bill are saved here automatically.

7 Vans, order bookers and delivery men

You don't set these up in advance — just type them on a bill and the app remembers them for next time (they appear as drop-downs). Manage the saved list any time in Settings → **Vans, Bookers & Delivery Men**.

Van is required on every bill

A bill cannot be saved without choosing a van. This also stops the same shop being billed twice on the same van on the same day by mistake.

8 Purchases — buying stock in

Purchases → + **New Purchase**. Record a delivery you received: date, vehicle, supplier, then one line per product (type the code, enter pieces and the unit cost). Saving it:

- **Adds the pieces to your stock.**
- **Updates each product's cost** to what you just paid, so your profit figures stay accurate.

You can View or Delete a past purchase. Deleting removes the stock it added (it won't let stock go below zero, and it's blocked on a day you've closed).

9 Making a bill

New Bill (menu **3**, or **Ctrl + N**). Fill it top to bottom:

1. **Van / Order Booker / Delivery Man**. Set once — they carry to every new bill this session. Van is required.
2. **Shop**. Type the shop code; the name and address fill in. New shop? Just type the name.
3. **Items**. Type a product **code** and the name, rate and amount fill in. Set **Carton** and/or **Loose Pcs**; total pieces and amount update live.
4. **Type per line**: **SALE** (billed), **REPLACE** or **FREE** (loaded onto the van but not billed).
5. **Trade Offer % / Discount / Tax %**. Enter a trade offer as a percentage per line (T.O %) or for the whole bill; the rupee amount is shown. The **PAYABLE** updates as you go.
6. **Save**. Click **Save & Next** (or **Ctrl + S**, or **Esc**) — it saves and clears for the next bill. Free-goods schemes are applied automatically on save.

The rate always follows the product

When you type a code, the rate shown is that product's own selling rate. If you type your own rate on a line, that stays until you change the code to a different product. So every product is billed at its correct price.

Fast keyboard entry

Press **Enter** to jump to the next box. On the last box of an item line, Enter adds a new line — so a whole bill can be typed without the mouse. Tick "Do not apply any scheme / discount" to bill a shop at plain rates.

After saving you can **View last bill**, then **Print** it or **Save as PDF** (Ctrl + P).

10 Schemes — free goods and trade offers

Schemes → + **Add Scheme**. Active schemes apply automatically to matching bills.

Free Goods

“Buy so many, get so many free.” The free pieces load onto the van as FREE lines (not billed). You can point a scheme at:

- **A single product** — e.g. buy 12 of one item, get 1 free.
- **A whole flavour group** — count every flavour together. Put the same **Group** on each flavour in Products (e.g. “JAM 190G”), then choose “**a whole flavour group**” on the scheme. Now a mixed dozen (say 5 mango + 4 apple + 3 mix) earns the free piece, which comes off the flavour bought most on that bill.

Trade Offers

A **percentage off** the bill once it reaches a minimum value — e.g. 2% off bills of Rs 20,000 or more. It's taken off the PAYABLE and reflected in your profit.

Per-flavour vs group

Older “buy 12 of one flavour” schemes still work. A group scheme is the newer, more forgiving option for packs sold in many flavours. A flavour is never given free twice for the same purchase.

11 Load Forms — loading the van

Load Forms bundle a van's bills for the day into one loading sheet. Filter by van and date, pick the bills, and **generate** the form. On the form you record what actually comes back from the van:

- **RTG** (returned good) pieces go back into stock when you **close** the form.
- Dented / leaked / replacement pieces are recorded too.
- You can re-open a closed form to correct quantities — the stock is reconciled, never double-counted.
- Print the load form for the driver.

Load-form returns vs sales returns

The load form handles stock that comes back **unsold** on the van. Money owed back to a shop for goods it returns is a **Sales Return** (§12) — the two are separate so stock is never credited twice.

12 Sales Returns — goods a shop sends back

Returns (menu, or **Alt + R**) → + **New Return**. Record everything that came back from a van's shops in one go:

1. **Pick the van** (required) and the date.
2. **Add the returned items**: type the code, the pieces, and mark each **Good** (sellable — goes back into stock) or **Damaged** (written off — no stock added). Both credit the shop.
3. **Save**. Stock goes up for good pieces, and the credit comes off your sales and profit.

- **Against a bill:** open a bill and click **Return Items** to credit exactly what was billed — you can't return more than was sold, and the credit matches the bill's discount and trade offer.
- Each return can be printed as a **Credit Note** (or saved as PDF).
- You don't re-open the van or the load form — one return per van covers all its shops.

13 Bills list — find, view, edit, print

Bills (menu 4) lists your bills, newest first. From here you can:

- **Search / filter** by van, booker, delivery man, or text (Ctrl + F jumps to the box).
- **View** a bill, then Print it, Save as PDF, make a tax invoice, or start a Return against it.
- **Edit** a bill — stock is adjusted correctly for any changes.
- **Delete** a bill — its stock is restored (blocked on a closed day, and if it has returns against it, remove those first).
- **Print all / Print selected** for a batch, and see a bill **Summary** for the filtered set.

14 Reports — Dashboard and Profit / Loss

Dashboard

Today's sales, bills and returns; sales over the last 7 days; sales by van; your best products; stock value; low-stock warnings; and recent bills, loads and returns. Sales here are shown **as billed**, before returns.

Profit / Loss

Choose a date range and view by day, week, month or year. It shows **Net Sales** (after returns), cost of goods, **profit** and **margin**, plus your top products and what schemes & discounts cost you. Print or save any report as PDF.

Why the two "sales" differ

The Dashboard shows sales **as billed** (before returns). Profit / Loss shows **Net Sales** (after returns) because profit must have returns taken off. Both are correct — they answer different questions.

15 Closing a day (locking it)

Settings → **Day open / close**. Close a date once you've finished with it to lock it: bills for a closed day can't be added, edited or deleted, and purchases/returns on it are blocked too. Re-open the date if you need to make a correction.

16 Settings, backups and starting fresh

Settings holds your company details, default tax, the saved vans/bookers/delivery men, the owner PIN, appearance (theme, font, text size), day open/close, and — most importantly — your data tools:

Save a backup

Writes a single backup file. Keep it on a USB or another PC.

Restore from backup	Replaces everything with a backup you choose. A safety copy of the current data is taken first.
Open backup folder	Opens where automatic safety copies are kept.
Load sample data	Fills an empty app with practice data for a demo.
Start fresh / Clear	Clears day-to-day records but keeps your catalogue.
Erase everything	Wipes it all (type RESET to confirm). A backup is taken first.

Backups are your safety net

Take a backup at the end of each week, and always before Restore or Erase. The app takes an automatic safety copy before anything destructive, but your own off-PC backup is what protects you if the computer is lost.

17 Keyboard shortcuts

Keys	What it does
Alt + 1 ... 9, 0	Jump to a screen — 1 Dashboard, 2 Profit/Loss, 3 New Bill, 4 Bills, 5 Load Forms, 6 Products, 7 Schemes, 8 Shops, 9 Purchases, 0 Settings
Alt + R	Open Sales Returns
Ctrl + N	New Bill
Enter	Next field on a bill / purchase — on the last box of a line, adds a new line
Ctrl + S	Save (bill, purchase or settings)
Esc	Close a popup — on New Bill it saves the bill
Ctrl + P	Print the open bill, invoice, summary or report
Ctrl + F	Jump to the search / filter box
Ctrl + = / Ctrl + -	Make the text bigger / smaller
F1	Show this shortcut list inside the app

18 Good habits & troubleshooting

Everyday habits

- Set the van, booker and delivery man once at the start of the day.
- Give every shop a clear, unique code — it makes billing and reports reliable.
- Record purchases as stock arrives so your stock and cost stay right.
- Take a backup every week and keep a copy off this PC.

If something looks wrong

Windows warns on open Unsigned app — click More info → Run anyway. Normal, once only.

A product bills at the wrong price	Check the product's Rate on the Products screen; the bill uses that rate unless you typed a different one on the line.
A free-goods scheme didn't apply	Check the scheme is Active, the quantity meets the "buy" number, and (for a group) every flavour shares the exact same Group text.
The app seems stuck for a moment	Big reports or backups can take a few seconds on a large database — it will respond again shortly.
Need to undo a bad import / reset	Restore the most recent backup (Settings → Data).

This guide covers Stock Manager v2.0. Screens are the same for every company edition; only the name and logo differ. Press **F1** in the app for the live shortcut list.
